Kirkwood, Calif. - August 22, 2016

On May 6, we received notice from the California Central Valley Regional Water Quality Board that asphalt grindings used in certain of our parking lots were found in Kirkwood Creek. Since receiving this notice, we have been coordinating closely with the Water Quality Board and other agencies to implement immediate remedial actions. We will continue to collaborate with these agencies to conduct a site assessment and will be further remediating any impacts to the local environment as necessary based on that assessment. Kirkwood takes very seriously our role in acting responsibly to protect the environment and will be taking steps to ensure that we protect our waterways from these types of issues.

Please check www.kirkwood.com for the latest information.
